the rapidly growing need for mobility has brought with it a major challenge for improvement in the operation and utilization of automotive systems the economical environmental and safety constraints imposed by the increase in the number of road vehicles and subsequent government policies also require substantial product development through the application of information technology this involves the enhancement of vehicle informatics and telematic systems with additional sensors and systems the advance in the design and development of automotive sensory systems is so rapid that there is urgent need for the experts involved in the technology to work together to provide a reference book for the engineer of today and tomorrow this motivated me to spend two years researching the topics and the basis on which such a book should be written the result is the present compilation of the work of international experts on the state of the art in the field of automotive sensory systems thus a unique collection has been created for the reference of all those concerned with or interested in the design and development of modern safe and intelligent vehicles although this book is intended for engineers managers scientists academicians and policy makers students should also find it valuable to meet the requirements of students the basics are explained in simple terms however it is hoped that others will appreciate this approach since most of us are well aware that gaps remain in our knowledge of the elements of our profession

the gm ls gen iv engine dominates the high performance
v 8 market and is the most popular powerplant for
engine swap projects in stock trim the gen iv engines
produce class leading horsepower the gen iv s
rectangular port heads flow far more air fuel than the
gen iii cathedral port heads however with the right
combination of modification procedures and performance
parts you can unlock the performance potential of the
gen iv engines and reach almost any performance target
engine building and ls expert mike mavrigian guides
readers through the best products and modification
procedures to achieve maximum performance for a variety
of applications to make more horsepower you need to
flow more air and fuel into the engine therefore how to
select the industry leading aftermarket heads and port
the stock heads for superior performance are
comprehensively covered the cam controls all major

this unique handbook assumes no starting knowledge of car electrical and electronics systems it begins with simple circuits and finishes with complex electronic systems that include engine management transmission control and stability control systems if you want to diagnose a simple alternator charging or headlight problem this book is for you but if you also want to fix complex electronic systems using on board diagnostics a multimeter or oscilloscope this book also shows you how to do that is it best to use a series or parallel circuit when adding a horn how do you use a multimeter to check a coolant temperature sensor against its specs how can you add an electronic timer that will keep your headlights on as you walk to your door when should you buy an oscilloscope and how complex an instrument do you really need the author has been writing about car electronic systems for over 25 years he is also an experienced and proficient car modifier who has performed numerous electronic modifications and upgrades to his own cars including world first modifications if you want a practical hands on book that demystifies and explains car electrical and electronic systems this is the book for you
