the effort of anthropometric historians to unearth the broad patterns of human biological well being has led to the examination of nearly forgotten centuries old records from dusty archives in practically all the continents of the globe french historians in the annales tradition were among the first to adopt methods from physical anthropology and from the biological sciences but the real expansion of the field dates from the pathbreaking work of richard steckel and robert fogel which launched the

discipline of anthropometric history on american soil research has confirmed that physical stature is related to nutritional status and therefore to real family income and thus to the general standard of living historians and development economists will find this line of research useful as it informs us about the standard of living of members of society for whom data on wages are seldom available women children aristocrats farmers and slaves in addition this research has shown that the biological standard of living may diverge from conventional indicators of welfare during the early stages of industrialization thus per capita income is an ambiguous measure of welfare during some phases of growth and it must be supplemented with data from other indicators such as physical stature the essays in this volume broaden our knowledge of the human effects of the momentous economic changes of the last two centuries extending analysis to regions for which such information has been lacking including russia canada indonesia italy and spain
