the undertaking of the treatment of an infant born with bladder exstrophy is one of the most weighty responsibilities that can fall upon the shoulders of the reconstructive surgeon the modern treatment of a child

born with bladder exstrophy began in the mid 1970 s with the widespread application of staged reconstruction this approach has consistently yielded very good results in several series however as in all serious congenital birth defects there is certainly room for advancement issues such as the routine use of osteotomy timing and type of epispadias repair combining bladder closure with epispadias repair the approach to the small bladder and the management of a failed exstrophy still remain this national institute of health national kidney foundation johns hopkins sponsored seminar was an attempt to bring experts in the field of pediatric orthopedic surgery pediatric urology pediatric surgery adult urology and basic science together to share their experiences in an attempt to foster new clinical and basic science research communications between the participants if these collaborations result then this first international meeting will have been successful the editors would like to thank all of the contributors for their timely and complete submissions john p gearhart m d ranjiv mathews m d vii contents 1 the embryology and epidemiology of bladder exstrophy

until recently interstitial cystitis was considered a urologic curiosity a rare problem with relatively specific diagnostic criteria that many urologists would see only once or twice in a decade this has changed drastically in

the last ten years interstitial cystitis is now a very controversial subject that has ignited the interest of physicians in general urologists in particular basic scientists and even government agencies it is a potentially much more common and more devastating disorder or group of disorders than had been believed the exponential growth in clinical and basic research is largely due to the efforts of patient groups who demanded that more attention be paid to this problem we owe them a debt of gratitude for putting interstitial cystitis in the spotlight and quite literally under the microscope in this book we have attempted to put together the current views of experts from around the world regarding the many aspects of this disorder it is hoped that we can provide an image of where we stand as we enter the 1990s if the book can stimulate other physicians and basic scientists to enter this exciting field of research and if it can provide hope to the many thousands of patients who suffer from this disease we will consider it a success acknowledgement this book is dedicated to the interstitial cystitis association and its hundreds of members who have contributed so much of their time and effort toward making this disease less of a mystery
