and remarkable familiarity with the literature and psychiatric schools in europe and the united states the english version of the amdp is a further addition to the small number of instruments that have been created over the last few decades and tested in an international setting today when multicentric collaborative studies have become a necessity and when comparative research has been recognized as a most promising research paradigm the addition of another way to understand and compare results obtained in settings elsewhere is of tremendous importance for this contribution to a common language which will make it possible for specialists in different countries to collaborate every praise should be given to the authors of this valuable work n sartorius director division of mental health world health organization v contents introduction to english translation introduction the earlier work amp i to amdp iii 4 development of amdp iii 6 documentation 10 10 data processing in europe

improved fieldwork methodologies and new standards in data accountability and accessibility more recently researchers have begun to recognize the immense potential available in the archived data as a source for linguistic analysis so that the field has become of increasing importance for typologists but also for neighbouring disciplines the present volume contains contributions by practitioners of language documentation most of whom have been involved in the volkswagen foundation s dobes programme dokumentation bedrohter sprachen the topics covered in the volume reflect a field that has matured over the last decade and includes both retrospective accounts as well as those that address new challenges linguistic annotation practice fieldwork and interaction with speech communities developments and challenges in archiving digital data multimedia lexicon applications corpora from endangered languages as a source for primary data typology as well as specific areas of linguistic analysis that are raised in documentary linguistics publisher s website

inhaltsangabe abstract today in a typical software project people do not document at all or invest a large amount of time to create documentation which at the end proves to be not useful or undiscoverable for others the goal of documentation is to conserve knowledge and make this knowledge accessible for others thereby easing collaboration however this goal is rarely achieved the whole process of producing documentation and searching for valuable information is highly ineffective and means a lot of wasted time often in a shorthand approach word excel and powerpoint files are used for documentation among these documents information is not interconnected as a consequence relevant information is hard to find full text searches take a long time and deliver poor results imagine searching all documents of a file server of a medium cooperation using the windows explorer search functionality the search will probably run several hours and hardly deliver any useful results if any information is found it is hard to tell if the document is

up to date who changed the document last and what was changed there is no automated mechanism to inform interested people about updates on any document or information another approach is using proprietary knowledge management technology and collaboration software like knowledge repositories in the late nineties companies started to implement knowledge management strategies with heavy use of technology the problem herein is that people have to be trained to use the knowledge management technology learn and understand the underlying principles and additionally the handling of specific software if the knowledge management technology is complex it imposes an entry barrier using knowledge management technology will then be burden for a software development team since the pressure in a software development is high it is unlikely that a team will be willing to invest much time for learning the technology and hence the pay off will never be realized furthermore if the basic principles and processes of a chosen technological approach turn out to be inadequate for a specific situation there is often no chance to adapt the knowledge management technology quickly this finally can lead to a situation that the technology is not used at all because at the end it is easier for workers to simply ask someone else they know

aim of this book this book will show if and how web technology can be used in
