in the early 1960s computers haunted the american popular imagination bleak tools of the cold war they embodied the rigid organization and mechanical conformity that made the military industrial complex possible but by the 1990s and the dawn of the internet computers started to represent a very different kind of world a collaborative and digital utopia modeled on the communal ideals of the hippies who so vehemently rebelled against the cold war establishment in the first place from counterculture to cyberculture is the first book to explore this extraordinary and ironic transformation fred turner here traces the previously untold story of a highly influential group of san francisco bay area entrepreneurs stewart brand and the whole earth network between 1968 and 1998 via such familiar venues as the national book award winning whole earth catalog the computer conferencing system known as well and ultimately the launch of the wildly successful wired magazine brand and his colleagues brokered a long running collaboration between san francisco flower power and the emerging technological hub of silicon valley thanks to their vision counterculturalists and technologists alike joined together to reimagine computers as tools for personal liberation the building of virtual and decidedly alternative communities and the exploration of bold new social frontiers shedding new light on how our networked culture came to be this fascinating book reminds us that the distance between the grateful dead and google between ken kesey and the computer itself is not as great as we might think

it s time we all stopped whining and learned a thing or two from the toughest cyclists ever including stephen roche whose cure for exhaustion was to go up a gear and fight harder all the way to the ambulance eddy merckx who hurt himself so badly in breaking the hour record that he estimated he shortened his career by a year beryl burton who crushed her male rival s morale with the offer of a piece of liquorice before speeding past to victory nicole cooke and edwig van hooydonck who rejected dope and became legends the hardmen tells the stories the good bits anyway of the 40 most heroic cyclists ever their bravery their panache and their perfect amount of dumb it reminds us that suffering on a bike liberates us from our daily lives and that in the words of lance armstrong pain is temporary quitting lasts forever proof that even assholes can be insightful

from the highly acclaimed author of ways of being we live in times of increasing inscrutability our news feeds are filled with unverified unverifiable speculation much of it automatically generated by anonymous software as a result we no longer understand what is happening around us underlying all of these trends is a single idea the belief that quantitative data can provide a coherent model of the world and the efficacy of computable information to provide us with ways of acting within it yet the sheer volume of information available to us today reveals less than we hope rather it heralds a new dark age a world of ever increasing incomprehension in his brilliant new work leading artist and writer james bridle offers us a warning against the future in which the contemporary promise of a new technologically assisted enlightenment may just deliver its opposite an age of complex uncertainty predictive algorithms surveillance and the hollowing out of empathy surveying the history of

art technology and information systems he reveals the dark clouds that gather over discussions of the digital sublime
